$$|rcom9| = |\vec{e}e \times \vec{r}c| = \frac{(HN3)}{2}r$$

$$|\vec{r}com9| = |\vec{r}com9| = \frac{(HN3)}{2}r$$

$$|\vec{r}com9| = \frac{(HN3)}{2}r$$

(ii) 柱序对A点面角的量

$$\int_{c} = \int_{c}^{c} \times m \mathcal{J}_{c} + \int_{c}^{c}$$

$$\int_{c}^{c} = \int_{c}^{c}$$

$$\int_{c}^{c} = \int_{c}^{c} \times m \mathcal{J}_{c} + \int_{c}^{c}$$

$$\int_{c}^{c} = \int_{c}$$

$$\int_{c}^{c} = \int_{c}^{c}$$

$$\int_{c}^{c} = \int_{c}$$

$$\int_{c}^{c}$$

$$\int_{c}^{c} = \int_{c}$$

$$\int_{c}^{c} = \int_{c}$$

$$\int_{c}^{c} = \int_{c}$$

$$\int_{c}$$

$$\int_$$

$$= \frac{1}{24} m w r^{2} \left[ (12 + 19 \sqrt{3})^{\frac{2}{3}} + (18 + 12 \sqrt{3})^{\frac{2}{6}} \right]$$

()4:解:以何适应置的奸AB为研系对象,否为如何。

奸作年面这的,沿南建发布角加速度分别为w和之,质心C的加速度为 Qcx, Qcy

南刚仔平面这的纷分方程

即风以=一(一点以内外+上心的外)(4)同理,以内方基点分析B的加速)发并投影至x初

$$\mathcal{L}_{CX} = \frac{1}{2} \alpha \sin \beta - \frac{1}{2} \omega^2 \cos \beta \quad (5)$$
